

RealTime Service

Exchange Central the first team calendar
with NT/2000 - event driven update service.

To provide automatic RealTime information to our Exchange Central, Add-On Products has developed this NT/2000 - service for users to whom the RealTime issue is important. The NT/2000 - service upgrades the manual update functionality within Exchange Central to a "high speed" automatic event driven update.

The main features are:

- ▲ Fully integrated client/server solution
- ▲ Only server installation required
- ▲ Automatic refresh of calendar information for realtime data viewing
- ▲ Full event driven data synchronization
- ▲ Revolutionary low pressure on the Exchange Server
- ▲ No longer necessary to push F5 to update Exchange Central manually
- ▲ Available in both Access and SQL versions
- ▲ Security supports Outlook permissions and Windows authentication logon
- ▲ Optional maintenance e-mail can be sent to the administrator ensuring maximum program reliability
- ▲ Calendar information viewing in "full text mode"
- ▲ Full support of private appointments
