

# BuddyList Deployment Manager

Manage IBM Lotus Sametime BuddyLists across any organization.

BuddyList Deployment Manager is the very latest in Instant's line of real-time enterprise collaboration solutions. BuddyList Deployment Manager allows network administrators to instantly deploy buddylists to people, select groups, or entire networks of Sametime users. Recently hire someone new? Has someone in your company changed their name? Instantly update select individual or group buddy lists.

**BuddyList Deployment Manager allows the deployment of BuddyLists without the hassle of taking down your Sametime server to do it.**

## FEATURES

- **Instant Deployment** Selected BuddyLists are instantly updated.
- **Runs in Notes** Update BuddyLists straight from Lotus Notes.
- **Update Buddies & Groups** Add/Delete a single buddy, multiple buddies, private groups, or public groups.
- **Rollback** Make a mistake in adding or deleting? Roll back all BuddyLists to their previous configuration quickly and easily.
- **Leverages IBM Instant Messaging/Sametime** Works with Sametime 3.0 and later.
- **Logging** All activities are logged.
- **No Server Downtime** Buddylist deployment is instant, no need to take the servers down.
- **Quick Installation** Install and have the ability to update multiple buddylists in a matter of minutes.
- **Domino To LDAP or Active Directory?** Quickly re-map all user identities to configure with current directory system.
- **Rename Users** Someone changes their name? Quickly update their name on all appropriate BuddyLists.
- **Deploy Bots** Create a bot using Instant Agent Framework? Instantly deploy it across a department or company.
