

Compliance and Discovery Strategy

For organizations that rely on Microsoft Exchange as a business-critical resource, complying with the vast array of country, government, industry and corporate rules and regulations for e-mail retention and retrieval, Archive One compliance can help to reduce legal risk while better managing resources for improved productivity.

Archive One Compliance will help with:

- Meeting SEC, NASD, Sarbanes-Oxley, ISO, DOD, HIPAA and other email compliance requirements.
- Reduce legal risks by retaining and recovering copies of e-mails.
- Secure centralized control and access.
- Improve awareness of legal exposure.
- Low Total Cost of Ownership – easy to implement and manage.
- Interfaces with leading storage management applications.
- Flexible and adaptable structure, economical and scalable from tens to thousands of users.

Archive One Compliance

Compliance Management

Archive One Compliance is an archiving, retention and retrieval management application for Microsoft Exchange, designed for organizations that need an effective, robust system that assists them to meet email archival and retrieval regulations.

Built with low Total Cost of Ownership as a prime objective, Archive One Compliance supports the existing email and storage architecture to protect your investment to date, allowing these to form the basis for email archiving.

Archive One Compliance can archive to a wide variety of near-line or offline storage media as appropriate, either directly or through industry standard storage management software such as HP OpenView Storage Data Protector and QStar.

Archive One Compliance Features

- Assists with e-mail compliance requirements.
- Integrates with leading storage management software.
- Captures all administrator defined e-mail messages.
- Fast, easy retrieval, sampling and audit.
- Archives in standard compressed format for efficient storage and recovers messages to original status without intervention.
- Interfaces with the Compliance Administrator through intuitive MMC interface for secure access and sampling.
- Writes archive and index to choice of SAN, NAS, Optical, WORM etc. as selected by the user organization.
- Scalable from tens to thousands of mailboxes.
- Archives internal and external e-mail.

Full discovery and audit trail.

- Secure administrator level control and access.
- Search for all items matching selected criteria.
- List and, if required, retrieve messages to designated Compliance Administrator(s).
- Full audit trails for regulatory compliance, including audit of searches.
- No special client required, all results available from Outlook.

Archive One Compliance Architecture

Software specifications and requirements

Archive One Compliance operations, retrieval and reporting, is controlled by a designated Compliance Administrator level authority.

Archive One Compliance works with Microsoft Exchange 5.5, 2000 and 2003.
Archive One Compliance requires Win2000 or later.

A single Archive One Compliance server can process multiple Exchange servers in the same Exchange Site or administrative group.

Archive One Family

Archive One Compliance is part of the Archive One Family; available for organizations that need to archive email for capacity management, regulatory compliance or internal e-policy reasons. C2C's philosophy is to provide solutions for the management of MS Exchange that are easy to install and manage, use industry-standard, non-proprietary applications and hardware and that are scalable to suit organizations from tens to thousands of users.

C2C provides a range of email lifecycle management software for Microsoft Exchange. Our solutions for Mailbox Size Management, Compliance and Discovery are used by over 3,000,000 users at 2000+ organizations world-wide. Our customers include central and local government and global and regional corporations.
