

Lower Storage Costs

- MailMeter File Archiver automatically removes or stubs files according to policies you set and frees up space on your expensive storage devices. Stubbing replaces the files with links to the file that was moved to the archive. It is seamless to applications and users.

Lower Management Costs

- MailMeter File Archiver removes the need for endless housekeeping by IT professionals trying to relieve the pressure of disk storage filling up.

Powerful, Automatic Solution

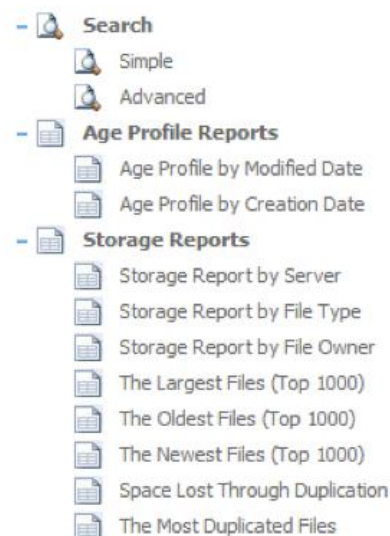

- MailMeter File Archiver runs at times you specify, actively and transparently searching for candidate files that meet your policies.

MailMeter File Archiver

Save Hundreds of Gigabytes of Storage

In most organizations, 50% of data files on servers will never be accessed again. Why keep buying more expensive storage instead of archiving old, unneeded files to a lower cost alternative?

- Data stored on network servers is growing at over 20% per year.
- Even though hardware storage costs per gigabyte are dropping, the costs of managing storage are skyrocketing.

MailMeter File Archiver delivers a policy based, automatic solution to manage the growing complexity of storage management.

File Virtualization

MailMeter File Archiver is a software solution that runs on a Windows server and communicates with MailMeter File Archiver agent software running on the servers you want to manage. The agents analyze file usage and at regularly scheduled intervals, notify the MailMeter File Archiver server that it has files that meet the file archiving policy rules you set, and then copies the files to its Archive Volumes and replaces the file with a link to the file in the archive.

	Name	Size	Date modified	Type

De-duplication and Server Consolidation

If you have two terabytes of expensive server storage where 50% of the data is never accessed, using MailMeter File Archiver to manage that space can gain you a terabyte in its first archiving process. Removing old files and de-duplicating across your file server farm can save you hundreds of gigabytes and allow you to consolidate servers. You will be able to take advantage of low cost SAN devices without changing any applications.

Optimize Your File Servers

MailMeter File Archiver provides four capabilities to assist you in saving storage:

- **Reporting**
 - View your files by server, by owner, by size, by type, by name, etc. to pinpoint the usage and abuse of your storage.
- **Deleting**
 - Clean up your file servers and purge old and unneeded files. From any report, just check the box next to a file name and click Delete, or set a policy for automatic deletion. Reclaim your storage in minutes.
- **Archiving**
 - Protect critical files by copying them to the archive server. Move older versions of files to the archive.
- **Stubbing**
 - Reclaim storage space without disrupting users. Remove older files from file servers and replace them with an intelligent “stub” that automatically and invisibly retrieves the original file from the archive.

Investigative Searches

More and more investigative searches require that you produce any relevant files. MailMeter File Archiver gives you the capability to quickly respond to any requests and search for specific files by name, type, date range, directory location, and owner across hundreds of servers.

Protecting Files from Accidents

- Critical files can be automatically archived and not “stubbed” – providing a fast recovery solution.
- Housekeeping tasks that are impossible to do manually (delete old files that are no longer needed) are handled automatically.
- Simple policies can protect files from early deletion or being overwritten with bad data. For example, if you set a policy rule “When a file is deleted, do not delete the copy from the archive for 30 days,” you can easily recover a file that has been deleted accidentally.
- MailMeter File Archiver can maintain generations of files. If you have applications that read in files, update them, and write them back, you can set a policy rule to “Keep a copy of the last ten generations of a file in the archive” in case you need to recover to a previous version.

MailMeter File Archiver Benefits

MailMeter File Archiver frees up expensive disk space while delivering protection and security for your information assets.

- Storage costs are reduced as older files are moved to less expensive storage.
- IT storage management is reduced as the MailMeter File Archiver policy engine performs its housekeeping tasks automatically.
- Fast recovery from accidental deletions.
- Age out and eventually delete unneeded files.
- “Archive” critical files needed for compliance or to meet organization retention periods.
- Fast searching of any archived file by name, type, date, folder, and any keywords — even across multiple file servers.

About Fleximation Systems Inc.

For more than 25 years Fleximation Systems Inc. has helped organizations of all sizes to find, evaluate, and procure solutions to manage and monitor their email, web, and networks more effectively. We specialize in email and network monitoring, email archiving, e-discovery, email recovery, and resource and conference room scheduling software. Our experience enables us to quickly recommend the right solution for your requirements—and to procure it at a price that meets your budget. View a complete list of the solutions we provide at www.flexnet.com, or call us @ 905-405-6211, or send us an e-mail at sales@flexnet.com or 1-800-263-8733 to schedule a free consultation.
