Compliance Attender

E-Mail Archiving, Management and Compliance

Compliance Attender for Lotus Notes is a new product from Sherpa Software designed to intercept, inspect and manage email communications in real-time. The core of Compliance Attender is Sherpa's proprietary RealTime technology, a series of components that allow the product to interact with mail at the operating system level then quickly trigger a series of policies or events as determined by the administrator. Compliance Attender is designed as a series of modules that satisfy specific business needs. Purchase an individual module or combine modules to build an email management solution that fits your needs.

Compliance Attender Modules:

- Journaling
- Filtering
- Classification
- Disclaimer
- Analytics

© 2010 Sherpa Software

What features do the Compliance Attender modules offer?

- Journaling Module: a robust journal of every message that has been sent or received, replaces the inefficient Domino journal mechanism
- Filtering Module: provides administrators with a variety of message management options to control:
 - Data leakage of sensitive information outside the enterprise
 - Internal SPAM (for example, restrict messages based on group membership, recipient count, or total message size (the space required to store all copies of the message))
 - The enforcement of acceptable use policies
- Classification Module: automatic classification (tagging) of messages based on a user-defined dictionary of terms
- Disclaimer Module: offers the ability to automatically attach sophisticated, rule-based disclaimers to outgoing mail messages
- Analytics Module: statistics collection and reporting

How does Compliance Attender work?

- Intercepts email messages before the Domino router processes them
- Evaluates messages against user-defined policies or restrictions
- Takes actions on messages, using the various capabilities described in the Compliance Attender Modules
- Offers the ability to apply policies and restrictions to internal messages, as well as inbound and outbound mail
- Intercepts mail from a variety sources including: Notes clients, iNotes, external or internal SMTP servers and Domino agents

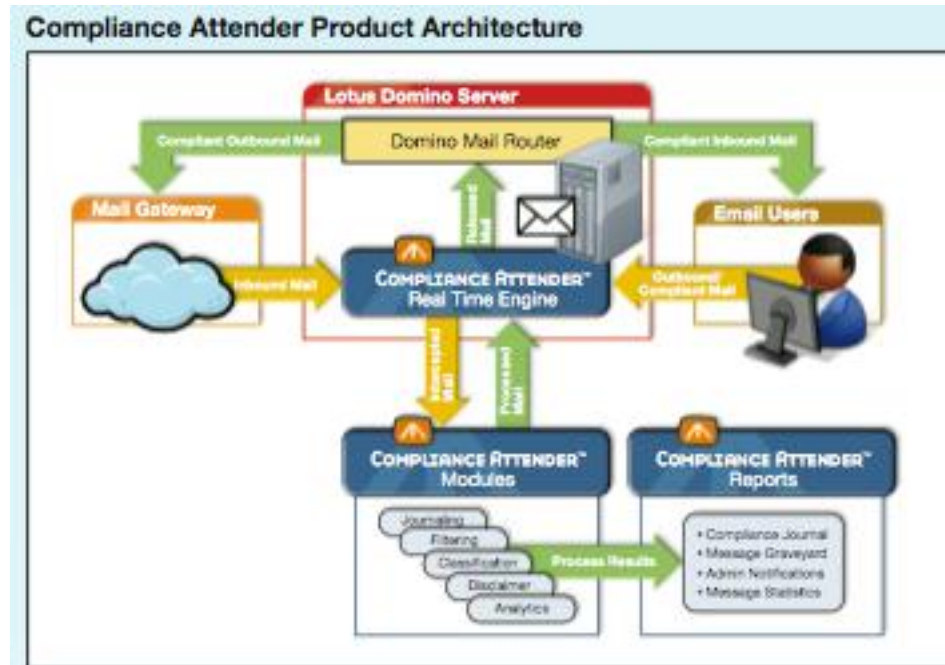

How is Compliance Attender architected?

Compliance Attender is a software application built on the IBM Lotus Domino C language

API. It runs as a server task on Domino servers that route mail. This unique architecture offers the following benefits:

- Runs on your existing hardware, no new servers or appliances need to be licensed, installed, or managed in your environment
- No new machines or appliances need to be licensed, setup, or managed
- Total cost of ownership is lower than competitive solutions since no middlewear software or RDBMS is required
- Enables management of all Domino mail, not just mail at the boundary
