FOR IMMEDIATE RELEASE

Fleximation Systems Joins the TransVault Reseller Program

Demand for a Migration Path to Next-generation Archiving Systems Accelerating Rapidly

[Bristol, UK, and Toronto, ON – Thursday, 17 July, 2008]

TransVault Software, the world leader in email archive migration software, is pleased to welcome Fleximation Systems to the TransVault Reseller Program.

TransVault is the world's first packaged archive migration software. It allows emails to be quickly and incisively exported, migrated, and optionally converted, ensuring they are fully discoverable and functional for end users in a new archive environment, be it based on the same archive solution or a new archive service.

"We are excited to add Fleximation Systems to our reseller program," says Barney Haye, Business Development Director for TransVault. "Wayne Simpson and his team have many years of experience selling multiple archiving systems. As TransVault sales specialists, Fleximation will play a key role in extending our market reach."

"We have a lot of clients whose first-generation archiving systems are no longer meeting their requirements," says Wayne Simpson, President of Fleximation Systems. "Some systems are functionally limited, some were incorrectly implemented, others have simply become too costly to maintain. But whatever the reason, TransVault simplifies and accelerates the process of migrating from one system to another while maintaining chain-of-custody and data integrity—both vital considerations for our clients."

TransVault enables organizations to cope with a myriad of scenarios that can occur during the lifecycle of archived emails. This includes staff relocations, archive consolidations, a move to an alternative archive system following a merger, or a switch to hosted archiving services.

"Migration to a new email or archiving service is no excuse for data loss and will be viewed poorly in a court of law. TransVault provides the best content integrity available in the industry, maintaining full audit logs," concludes Mr. Haye.

About TransVault

TransVault development started in May 2006 to address a growing need in the marketplace to migrate archived content between different email platforms, including IBM Lotus Notes and Microsoft Exchange.

The product has since been extended to provide a series of connectors that support fast, secure, and transparent movement of email records within and between different vendors' archive repositories, including ZANTAZ, Symantec, IXOS, Microsoft and EMC.

The team behind TransVault has more than 11 years messaging experience and over 7 years experience of deploying different e-mail archiving and compliance platforms in some of the largest, most successful implementations in the world.

Support for additional archive platforms is being added all the time.

About Fleximation Systems

For more than 20 years Fleximation Systems Inc. has helped organizations of all sizes to find, evaluate, and procure solutions to manage and monitor their email, web, and networks more effectively. We specialize in email and network monitoring, email archiving, e-discovery, email recovery, and resource and conference room scheduling software.
