

Instant IMtegrity

Instant IMtegrity for IBM Lotus Sametime

Instant IMtegrity is the leading solution specifically designed and natively built for IBM Lotus Sametime to securely log, save and archive both IBM Lotus Sametime Connect and native AOL Instant Messenger chats for internal auditing, searching, SEC 17a-4 and NASD 3010 compliance.

FEATURES

Instant IMtegrity for IBM Lotus Sametime allows you to securely log, save and archive both IBM Lotus Sametime Connect client and native AOL Instant Messenger client chats. It also allows you to map anonymous AOL screen names to corporate user identities and authenticated names via an LDAP directory and send dynamic, customizable company disclaimer messages to IM chat parties. Chat logging formats include XML, plain text and Lotus Notes database formats. All recorded Lotus Sametime and AOL AIM chats are accessible via web browser and/or Lotus Notes and are protected by access control lists. Chat participant names are color encoded for easier identification. Chats can be full text searched via a "google-style" web interface. Supports SOX 4 and 5 proxy servers, LDAP directory servers and features a fully automatic MSI installer. Instant IMtegrity provides full support to reach SEC 17a-4 and NASD 3010 compliance.

- **Audit and log "who says what", what was promised and when and for how long people chatted on-line.**
- **Authenticate and Identify anonymous AOL screen names and match them to real user names from your LDAP directory.**
- **Notify AOL chat parties with corporate disclaimer text (inbound and outbound).**
